S. A. HARRISON, C.C.

To the Mayor, Aldermen and Councillors of the Borough of Spenborough.

MR. MAYOR, LADIES AND GENTLEMEN,

I have pleasure in submitting my Annual Report relating to the Borough of Spenborough for the year 1965 and have, as usual, included information about the Health Services provided by the West Riding County Council within the Borough. Spenborough, together with the adjoining Urban District of Mirfield, comprise one Health Division within the County Council scheme of Divisional Administration.

Some points from the Report are perhaps worthy of particular note:—

The Registrar General's mid-year estimate of population is 37,820, an increase of 300 since last year and of 1,403 since the 1961 Census. The natural increase in population in the year under review (excess of births over deaths) was 208.

The Birth Rate of 18.4 (19.7 standardised) is higher than usual for Spenborough and it is interesting to note that of the 708 births only 69 or slightly less than 10%, were born at home. This has been made possible by the early discharge from hospital following child birth which is becoming so popular. In fact this occurred in 132 cases and appears to have no detrimental effect where home conditions are suitable and domiciliary after-care is adequate.

The Infant Mortality Rate of 15.8 and the Neo-natal Mortality Rate of 10.1 bear favourable comparison with other areas, though the Stillbirth Rate of 18.4 was rather higher than usual.

The adjusted Death Rate of 13.0 is as usual rather higher than the average for the Country as a whole and the commonest causes of death were coronary disease, cancer, "strokes" and bronchitis.

The immunisation state of the younger age groups against Diphtheria, Whooping Cough, Tetanus, Smallpox and Poliomyelitis was well maintained, although the acceptance rate for Tuberculin testing and B.C.G. vaccination of thirteen year old school children was disappointing at only 61%. A vaccine has now been produced which is safe in use and effective in prevention against measles. It is available through the National Health Service but cannot at the present time be administered under Local Health Authority Schemes of preventive inoculation.

Apart from measles and chicken-pox which were prevalent in moderate numbers throughout the year, eight new cases of pulmonary tuberculosis and two of non-pulmonary tuberculosis were notified. The results of a Mass Radiography Survey carried out in May are given in the body of the Report.

All the other activities of the Divisional Health Department seemed to continue with increasing case loads and increasing work. This applied to the mental welfare services, the home nursing and health visiting services, and particularly to the attendances at infant welfare clinics which were very well attended throughout the year.

Unfortunately it has not yet proved possible to start a clinic for routine cervical cytology as the hospital laboratory services have been unable to undertake the examination of specimens. There is a considerable demand for this service and it is hoped that facilities will be available in the ensuing year.

A note is included in the Report about the development of services in the Health Centre following its first full year of occupation.

In connection with the care of the aged, two wardens were appointed for visiting elderly persons living in private houses in the Gomersal and Norristhorpe Wards, and it is anticipated that further provision will be made for the benefit of elderly people living in private accommodation in other Wards of the Borough. Plans were formulated for the erection of community centres for elderly persons on the Turnsteads and Windybank estates, and the Corporation intends to provide further special blocks of warden supervised flatlets in most Wards of the Borough. If we add to these services such other activities as chiropody, home helps, meals on wheels (organised by the W.V.S.) and the recreational activities run by voluntary agencies, I think it may be claimed that there is a realistic and humanitarian approach to the problems of old age whether or not accompanied by disability or ill-health.

However, the shortage of hospital beds, and incidentally of Part III accommodation, for aged and chronic sick persons in the area is a serious defect in the provision of a comprehensive service.

I trust that it will be apparent from a perusal of the section of the Report dealing with the school health service that the oversight of child health in a preventive sense is also comprehensive, with a strong emphasis on routine supervision and ascertainment of defect. In particular there has been considerable increase this year in the routine screening for impairment of hearing.

On the section of the Report dealing with the environmental services, apart from the great amount of routine work performed, it is pleasing to note in particular steady progress with the clean air programme. Although the date of operation of the No. 6 Area (Whitehall Road/Scott Lane) had to be deferred from December, 1965 to April, 1966, the No. 7 Area (Scott Lane/Rawfolds) was prepared and submitted for confirmation. So far 46% of the houses and 27.4% of the acreage of the Borough have been brought within Smoke Control Orders and it is intended to cover the entire area by 1970 if possible.

The phenomenal rate of private house building continued during the year with the completion of 386 private houses bringing the total new privately owned houses built in the past seven years to over seventeen hundred. A further 88 houses were represented for clearance action so that a steady rate of progress has been maintained in this direction also. The Council has ambitious schemes for the building of new properties well advanced, and when these come to fruition it should be possible greatly to accelerate the demolition of houses within the Borough which are unfit by modern standards. In conjunction with this the Improvement Grant scheme is well under way and 104 grants were made during the year. There is no doubt that a very

considerable improvement in the general housing conditions within the area has taken place during the past ten years.

The improvements at the public abattoir were finally completed during the year and it now fully complies with the hygenic and humane requirements of the Slaughterhouses Act, 1958.

Considerable work was done on inspection of premises under the Railways, Shops and Offices Act, from which it became obvious that this legislation will prove of considerable value to the public.

Although no cases of brucellosis in human beings came to notice during the year, three samples of untreated milk were found to be infected with this organism. The producers concerned were most co-operative and the infected animals were quickly traced and removed from the herds. Unfortunately these animals can still be sold through normal commercial channels and the position is therefore highly unsatisfactory. Until the long promised eradication scheme is promulgated it is, in my opinion, desirable that wherever possible milk for human consumption should be subject to pasteurisation.

Once again I am greatly indebted to Mr. Templeman, the Chief Public Health Inspector, as to all members of the Divisional Health Department, for unfailing help and support throughout the year. In conclusion I must also thank the Chairman and Members of the Spenborough Health Committee for their interest and support throughout the year.

I am, Mr. Mayor, Ladies and Gentlemen,

Your obedient servant,

WILLIAM MASON DOUGLAS,

Medical Officer of Health and Divisional Medical Officer.

#### POPULATION AND SOCIAL CONDITIONS.

The provisional population of the Borough of Spenborough at the 1961 Census is 36,417, an inter censal decrease of 564. However, the Registrar General's estimate of population at the middle of 1965 was 37,820, and this figure is used throughout this Report in calculating rates.

The district, although mainly industrial in nature, contains much open space and a fair amount of agricultural land. There are over four hundred factories in the district but only about ninety of these employ more than twenty persons. Although processes connected with the woollen textile industry are the predominant industry, a great diversity of manufacture is carried on. There is the advantage in this that the whole community can not be affected by recession in any one branch of industry.

I am indebted to the Manager of the Spen Valley Employment Exchange for the following information regarding employment in the district:—

The year 1965 was one of continuing prosperity for Spen Valley. Unemployment remained low throughout the year at approximately 0.4% of the insured population, which was the figure in December. The Regional and National percentages for December were 1.1% and 1.4% respectively.

The manpower shortage in most industries continued throughout the year. Skilled workers in particular, were in short supply.

Illegitimate	• • •	•••	• • •	• • •			_
					8	5	13

Stillbirth rate per 1,000 total live and stillbirths: 18.3.

Infant Mortalit	y				Males	Females	Total
Legitimate	• • •	• • •	• • •	•••	8	2	10
Illegitimate	• • •	•••	• • •	•••	1	_	1
					9	2	11

Infant Mortality Rate per 1,000 live births: 15.8. Neo-natal Mortality Rate per 1,000 live births: 10.1.

The birth rate at 18.4 per 1,000 population is greater than last year (18.2) and when adjusted by the Comparability Factor (19.7) is higher than that of England and Wales and the County as a whole. The number of births exceeded the number of deaths by 208. Of the 708 births only 69 were born at home and there were 13 still-births compared with 11 last year.

Re-inforcing doses	_	3	3	3	415	8	432

I give below a table showing the numbers and estimated percentages of children who have had a course of immunisation within the last five years separated from those who had a course of immunisation previously:—

Age at 31-12-65	Under 1 1965	14 1964-1961	<b>59</b> 1960-1956	10—14 195519 <b>5</b> 1	Under 15 Total
Last complete course of injections (whether primary or booster) A. 1961-1965	240 (35%)	1976 (79%)	1481 (56%)	1314 (52%)	5011 (60%)
B. 1960 or earlier	=	_	1136 (43%)	894 (35 <b>%)</b>	2030 (24%)

## Whooping Cough Immunisation.

The following table shows the number of children who completed a primary course of pertussis vaccine (singly or in combination) in Spenborough during the year ended 31st December, 1965:—

Year of Birth	Number of Children
1965	227
1964	290
1963	22
1962	16
1958-61	8
	Total 563

Whooping Cough Immunisation in relation to Child Population.

Number of children at 81st December who had completed a course of immunisation at any time before that date.

Age at 31/12/65 i.e. Born in year	Under 1	1—4	5—9	10—14	Under 15
	1965	1964-1961	1960-1956	1955-1951	Total
Number immunised	227	1985	1920	1231	5363

Approximately 33% of children under one year and 79% of children between one and four years of age had received protective inoculation at the year end.

#### Smallpox Vaccination.

Table showing Persons Vaccinated and Re-vaccinated during 1965.

Age at date of vaccination	0-3 mths.	3-6 mths.	6–9 mths.	9–12 mths.	1	2–4	5–15	Total
No. Vaccinated	3	_	_	2	163	59	9	236
No. Re-Vaccinated					_		5	5

## Poliomyelitis Vaccination.

The oral method of vaccination against poliomyelitis using the Sabin vaccine is now the only method adopted in this Division. This is easy and convenient to use, and causes no upsets whatever.

The following table gives details of poliomyelitis vaccination carried out during the year in Spenborough:—

		. Y	Others under				
	1965	1964	1963	1962	1958-61	Age 16	Total
Completed Primary Course	146	408	48	24	66	17	709
Re-inforcing doses		1	4	5	488	22	520

#### Tetanus.

The following table gives details of tetanus vaccination carried out during the year in Spenborough.

		Y	Others under				
	1965	1964	1963	1962	1958-61	Age 16	Total

Re-inforcing doses		3	3	2	414	17	439

#### Vaccination Against Tuberculosis.

Vaccination against tuberculosis is available to certain contacts of cases of tuberculosis, especially young infants, and also to school-children of 13 years of age. The former are carried out by the Chest Physician at the general hospitals, and the details of our school programme are given in the section relating to School Health for the sake of convenience.

Hospital

#### TUBERCULOSIS.

Eight new cases of pulmonary tuberculosis were notified for the first time during the year, and there were two cases of non-pulmonary tuberculosis. There was a reduction of ten cases altogether in the number remaining under supervision following treatment in previous years. The figures show that there is still a reservoir of infection within the population which requires continuing effort towards case finding and the protection of contacts.

The work done in the continuous supervision by the public health staff and by the consultant chest physician of patients remaining on the register continued as usual. Nurse Smith, the Tuberculosis Visitor, paid home visits in connection with treatment and contact tracing of tuberculous patients, and by her continued attendance at the chest clinic at Dewsbury General Hospital she also maintains the close and happy liaison which it is essential to maintain between the therapeutic and preventive aspects.

We are continuing our efforts to protect younger children by tuberculin testing of five and eight year olds at school and by the B.C.G. vaccination programme among the thirteen year olds.

The statistical details of Tuberculosis in Spenborough are as follows:—

		Pulm	onary	Non-Pu	lmonary
		Male	Female	Male	Female
(a)	Number of Cases on Register at commencement of year	37	18	4	7
(b)	Number of Cases notified first time during the year	6	2	1	1
(c)	Removals from other areas	_			
(d)	Number of Cases removed from the Register	8	8	3	1
(e)	Number of Cases remaining on the Register	35	12	2	7

There were two admissions to Sanatoria during the year and one discharge.

#### MASS RADIOGRAPHY.

The Mass Radiography Unit of the Leeds Regional Hospital Board visited the district in April and May, and held both private and public sessions in various parts of the Borough. From the figures given below, supplied to me by the Unit, it will be seen that eleven cases of active tuberculosis were detected. Ten of these only work in Spenborough and are normally resident outside the Borough boundaries, and of these, nine were Asiatic immigrants. The information given below, therefore, is in respect of the people actually examined during the survey and includes persons normally resident in other areas.

#### CLECKHEATON HEALTH CENTRE.

The Centre was occupied in October, 1964, and was officially opened by Sir George Godber on the 2nd April, 1965. A description of the accommodation and an outline of the services provided from the Centre has been given in a previous report.

At the end of its first full year of working it is possible to say that many of the aims of Health Centre development have been accomplished and that the framework which it provides for the expansion and integration of Medical Services is being utilised so far as is possible under the present administrative structure of the National Health Service. Thus a large number of the public have been provided with pleasant and convenient premises in which to obtain Medical and Social Services covering a wide field of human need. The General Practitioners have accommodation of a high standard in which to conduct their practices, and there has been a steady development of activities on the Public Health or preventive side, the point being that these are not being developed in isolation but in close co-operation with the General Practitioners, the Hospital Service and the District Council.

So far the only involvement of hospital personnel in the work of the Health Centre is in the establishment of the monthly advisory Paediatric Clinic, an Ophthalmic Clinic for school children, and the attendance of a Consultant Psychiatrist at the socio-therapeutic Contact Club for mentally disturbed patients. I feel that there is opportunity for the expansion of the activities of hospital medical staff within the Health Centre.

The Contact Club has been very well attended during the year since transfer to the Health Centre; there has been considerable expansion in the Preparation for Parenthood courses which are given to expectant mothers; in conjunction with the Welfare Officer a weekly club for handicapped persons has been established; the Family Planning Clinic goes from strength to strength, the location of the Registrar of Births and Deaths in an office in the Health Centre provides yet another convenient service for the public, and the Police conduct a Tufty Club for teaching road safety to pre-school children.

Many interesting matters have been discussed at the Medical Staff Committee Meetings which have been held at regular intervals, among these being the possibility of joint purchase of medical equipment such as an Electro Cardiograph and the possible use of a Laboratory Technician on an experimental basis. While these matters have not yet come to fruition they have at least stimulated interest and discussion.

I do not think any serious snags have been encountered and I think it is true to say that of the many visitors to the Health Centre, official and otherwise, all have been impressed with the standard of accommodation, the facilities provided, and the progress made towards co-operation and integration.

#### MENTAL HEALTH SERVICES.

This year has seen a great step forward in the mental welfare services for the mentally ill with the opening of the new Psychiatric Unit at St. Lukes Hospital in Huddersfield. Because this is attached to a general hospital there has been a greater willingness on the part of patients to go in for treatment. The demand for beds, however, still exceeds the provision and there has had to be a rather careful selection of patients. The "revolving door" policy of the Ministry demands a constant turnover of beds, and so the patients with the recurrent or chronic type of illnesses are guided towards Storthes Hall rather than St. Lukes. The Mental Welfare Officers have been afforded and indeed encouraged to have ready access to patients in both hospitals, and this together with the fact that the hospital consultant regularly attends the Contact Club at the Health Centre, Cleckheaton, has helped considerably in bringing about the continuity of care which is so essential.

There is an increasing tendency for more patients to be referred to the Mental Welfare Officers for "pre-care", and there is an excellent relationship between the Mental Welfare Officers, the General Practitioners and the Hospital staffs.

The mentally subnormal and severely sub-normal patients in the area are transported daily to either the Lincoln House Occupation Centre in Heckmondwike or the West Ardsley Occupation Centre and Special Care Unit, and there has been no undue delay in obtaining admissions.

The statistical summary below relates to the work of the Mental Welfare Officers carried out in the Spenborough part of the Health Division.

#### HOME NURSING SERVICE.

The number of cases attended by the district nurses increased this year by 85, but the number of visits paid was slightly reduced. The system of attachment of district nurses to individual medical practices or groups of practices, rather than allocating work on an area basis, has worked extremely well and the closer co-operation on cases between the doctors and nurses has been more satisfactory both to them and to the patients. No particular problems have arisen during the year.

The following is a summary of the total number of cases dealt with during the year, *i.e.*, cases completed during the year plus cases still under treatment on 31st December:—

Classification	No. of cases attended by Home Nurses during the year	No. of visits paid by Home Nurses during the year
Medical	$   \begin{array}{r}     482 \\     170 \\     \hline     3 \\     16 \\     12   \end{array} $	$ \begin{array}{c} 12,103 \\ 2,880 \\ \hline                                   $
TOTALS	683	15,344

The domiciliary midwifery staff in the Division was further reduced this year on the resignation of Nurse Cowburn, a part-time midwife, in August, when she commenced training as a Health Visitor. The remaining staff managed with some difficulty, particularly in periods of sickness and off-duty, to cope with the demands made upon their services. In Spenborough there were sixteen fewer domiciliary confinements than last year, but the increasing vogue of early discharges from hospitals and maternity homes has meant an increase in the amount of post-natal visiting by the midwives. The following table shows the amount of work carried out by the Midwives in Spenborough during the year:—

As reported in last year's report the only Local Authority Antenatal Clinic is held weekly at the Health Centre on Mondays and is followed by a Relexation and Mothercraft class. The numbers wishing to attend these classes continue to grow and an additional class has been held on a Thursday afternoon.

During the latter half of the year an approach was received from a General Practitioner for him to hold an Ante-natal Clinic for his own patients in Local Health Authority premises. As this is in line with the County Council policy for co-operation and liaison with the General Practitioner Service, arrangements were made for this clinic to be held at the Valley Road Clinic. Nineteen sessions were held at which the Health Visitor attached to the Practice attended.

#### HEALTH VISITING AND CHILD WELFARE.

Only part of the scope of the health visitors' duty are shown by the statistical returns of their visits, etc., during the year. And they are also engaged in nursing duties within the School Health Service. The infant welfare clinics continued to be very well attended and particular attention is paid to the deviations from the normal in respect of phenylketonuria, ambliopia, hearing and congenital dislocation of the hip. The health visitors have also continued to provide home background reports for hospitals with special regard to geriatric cases. As there is always a waiting list for the admission of such cases this is the greatest assistance in assessing priority. The whole bias of the work of the health visitor is, however, towards education and although 404 parent craft talks or lectures were given at schools during the year this is but a small part of the health education work which she actually carries out.

The system of attachment of individual health visitors to individual medical practices or groups of practices, rather than allocating work on an area basis, has presented no problems other than the additional amount of travelling involved. This is compensated for by the much closer working relationship between the general practitioners and the nurses concerned, which is of considerable benefit to the members of the public who require their services.

During the year 1,040 tins of National Dried Milk, 9,832 bottles of Orange Juice, 808 bottles of Cod Liver Oil and 462 packets of Vitamin Tablets were issued.

#### PROBLEM FAMILIES.

Eight full meetings of the Co-ordinating Committee were held during the year at times when it was felt that the circumstances of a few individual cases required special consideration. The persons brought together have included Health Visitors, Public Health Inspectors, Housing Managers, Local Authority Treasurers, Officers of the N.S.P.C.C. and National Assistance Board, Children's Officer, School Welfare Officers, Welfare Department, etc.

As a result of these meetings a concerted line of action was adopted in each case; each department represented knew what the others were doing and the action was, therefore, felt to be more effective than would otherwise have been the case. Divisional area there were five cases in respect of whom the County Council have given rent guarantees to the District Councils. There is no doubt that this action prevented eviction in the majority of these. One case has cleared the rent arrears and is now living in private accommodation. A second case, as was becoming obvious, failed to respond to the great amount of work and encouragement which they had received, and it was then felt that it would be in the best interests of the five children for them to be taken into care. This was done and the parents were evicted from their Council house. Following the eviction the District Council undertook repairs and redecorations of their house at a cost of approximately £200. At the end of the year there were, therefore, three rent guarantee cases operative.

We seem to encounter a number of cases in which there is no active ill-treatment of the children and where the prime difficulty is that the father is unwilling to work sufficiently to prevent the accumulation of debts and to provide reasonable standards for his wife and children. Frequently the children of such families are taken into care (often in their own best interests) by the process of evicting the parents from their house, and it is difficult to understand why there are not more prosecutions of these men for failure to provide. My own feeling is that it ought to be more easy to do this than it appears to be at the present time.

#### BOROUGH OF SPENBOROUGH HOME SAFETY COMMITTEE.

The Committee met six times during 1965 and participated in all the Campaigns sponsored by the Royal Society for the Prevention of Accidents.

The winter hazards campaign covered falls and poisoning and publicity material was obtained and distributed through the schools, libraries, clinics, old people's wardens, etc.

The Committee took part in the Civics Exhibition at the Town Hall in March and displays covering many aspects of home safety were obtained on loan from the West Riding County Council. This Exhibition was very well attended by the public.

During July, August and September a "Check for Safety" Campaign was run. Leaflets covering safety factors of heating appliances were distributed by the local coal merchants covering solid fuel appliances; the North Eastern Gas Board and the Yorkshire Electricity Board distributed leaflets covering gas and electric fires; 2,000 other leaflets were distributed through the public library, clinics and old people's wardens.

The highlight of the Committee's activities during the year was its participation in the National Fire Prevention Campaign. The Committee ran a Fire Prevention Week from the 21st to 28th October and received excellent co-operation from the County Fire Brigade staff stationed at Cleckheaton. On the Saturday of the Week there was a parade of fire fighting equipment, with the County Fire Brigade Pipe and Brass Band and supporting transport from the Y.E.B. and the N.E. Gas Board. A "rescue", using a high turntable ladder was made from the top of the Town Hall clock tower and there were excellent displays and film shows at the Cleckheaton Fire Station which was open to the public throughout the week. It was estimated that 1,500 adults and 800 children visited the Fire Station during the week.

Other campaigns covered the safe use of fireworks and Christmas safety. The Committee also provided two old people with fireguards free of charge.

P.M.

#### CHIROPODY SERVICE.

The chiropody service for elderly and handicapped people continued to operate successfully during the year and there were no undue delays in instituting or continuing treatment. There was a demand for a clinic to be started in the Scholes area and arrangements were made for a fortnightly clinic to be held at the Old Folks Shelter there as from the 30th September, 1965. The number of persons receiving clinic treatment increased and there was an increased demand for treatment in their own homes by people unable to attend the clinics by reason of old age or infirmity. No special problems presented themselves and the service is considered to be adequate for the needs of the area.

In addition to the above, six sessions were held at "Kenmore" Cheshire Home where 9 handicapped patients received 54 treatments and 7 sessions were held at Brooklyn Grange, Cleckheaton, where 18 patients received 51 treatments.

### HOME HELP SERVICE.

The demand for this service was again increased this year, and it was fortunate that this demand could be met by the recruitment of suitable staff. There is always a considerable turnover in the home help staff and recruits were not as readily forthcoming as in previous years. However, nobody has gone without for very long when the need for such help was obvious, and although the service is a difficult one to administer no major problems have arisen. As usual the figures reveal the benefit which the aged and chronic sick receive from this service. They constitute 88% of the cases.

#### SCHOOL HEALTH SERVICE.

The basis of our School Medical Service has continued to be routine medical examination of all children in their first year of school life, the last year of primary schools and in the last year of school life. The current trend towards selective school medical inspection has not been adopted but it is felt that weekly visits (sometimes oftener) by the nursing staff to the schools, together with the many visits of the school doctors for routine purposes, gives ample opportunity for children with special problems to be brought forward for consideration. Furthermore, as the school nurses are in the main also employed as health visitors, their close association with general practitioners also helps in this regard.

It will be noticed that no eye conditions are recorded in the table of defects, but this is because each child's vision is tested every year by the nursing staff and in fact 161 children were referred to the Consultant Ophthalmologist for the first time through this channel.

Considerable progress was also made in the routine tests for hearing, particularly in the 6/7 year olds and, as a result of this, 61 children were referred to the Consultant Ear, Nose and Throat Surgeon for further investigation.

It has not yet been possible to replace the Speech Therapist who resigned at the end of 1963. Many children are in need of speech therapy, and only the more seriously afflicted can be accommodated by the hard-pressed hospital speech therapy service. This aspect of the work becomes even more important when it is remembered that the Division contains a Day Special School for educationally subnormal children serving a large catchment area. A percentage of pupils attending such a school require regular, sustained speech therapy if full potentials are to be realised. The post continued to be advertised.

At the end of the year 31 children were awaiting placement in special schools, of whom 24 were for subnormality of intelligence. A considerable period frequently elapses before these placements can be effected and, while this is no doubt serious from an educational point of view, it is very much more serious from a psychological aspect. We have seen many instances of children whose entire demeanour and personality improves after they are admitted to special schools with small classes, where they are competing with their peers instead of struggling against failure among others more advanced.

Finally the general standard of cleanliness among schoolchildren remained on the whole satisfactory, only 301 individual children being found to have head infestation during the year out of nearly 13,250 inspections.

# Classification of the Physical Condition of Children Examined at Routine Medical Inspections.

### SPECIAL EXAMINATIONS.

In accordance with the requirements of the Education Act, 1944, a number of children have been referred by the Education Authority which has necessitated the arrangements of special examinations. During the year 78 children were examined involving 88 examinations altogether. The following recommendations for special education were made:—

Education in a School for the Deaf	4
Education in a Day School for Educationally Sub-normal Pupils	12
Education in a Residential School for Educationally Sub-	
normal Pupils	4
Education in an Open Air School for Delicate Children	3
Special Education in an ordinary school	8
Referred to the Child Guidance Clinic Education in a School for Partially Sighted Children	17 1
Education in a School for Partially Signted Children	1
Home Tuition	ī
Reported to Local Authority for the purposes of the Mental Health Act:—	
Section 57(4) as amended (unsuitable for education at school)	1
For Care and Guidance after leaving school	6
During the year the following admissions to special school	ols were
made:— Ones Air School for Delicate Children	ຄ
Open Air School for Delicate Children School for Blind Children	$\frac{2}{1}$
Day School for Educationally Subnormal Pupils	7
Residential School for Educationally Subnormal Pupils	1
During the year the following discharges from special	schools
were made:—	
School for Physically Handicapped	1

# TUBERCULIN JELLY TESTING OF SCHOOL ENTRANTS AND EIGHT-YEAR OLDS.

Tuberculin jelly testing of school entrants and eight year olds continued as a routine measure throughout the year. A letter of explanation and consent form was sent by the teachers with the Form N.P. to the children in these groups when they were due for medical examination at school. These were returned to the school and the school nurse applied the tuberculin and control jelly to those children whose parents had consented to this procedure being carried out, three days before the school medical inspection was due to be held. The School Medical Officers read these results when the children were presented for medical inspection and the implications were explained to the parents. Where the jelly test proved to be positive, the children were invited to the school clinic for a further skin test and, where this again proved to be positive, the tuberculosis visitor was informed and she arranged for follow-up of the child and contacts at the chest clinic.

I give below the results of the jelly tests for the year ended 31st December, 1965:—

### CLEANLINESS INSPECTIONS.

Three routine inspections were carried out at each school by the school nurses and a total of 13,250 inspections and re-inspections were carried out. 301 individual children were reported to be unsatisfactory on 397 occasions but it should be pointed out that in the majority of cases the degree of infestation is extremely light. The incidence of infestation was in fact less than it has ever been before.

The remedial procedure adopted on the discovery of these defects is to notify the parents informally in the first instance, visiting if necessary to give advice on the methods of dealing with infestation. If cure is not effected the nurse visits the home and interviews the parents, and finally, if it is evident that insufficient care is being exercised, the Statutory Notice under the Education Act, 1944, is sent requiring the child to be cleansed to the satisfaction of the Medical Officer or to the person appointed by him for that purpose within 48 hours. No Statutory Notices were issued during the year.

The section of the work which follows, relating to the Public Health Circumstances of the area and the work of the Public Health Inspectors, has been compiled by Mr. J. F. TEMPLEMAN, Chief Public Health Inspector.

### FACTORIES ACT, 1937-59.

### Factories (Mechanical and Non-Mechanical).

There are 233 factories in the area. Of these factories, 230 are factories with mechanical power and 3 without. 28 visits were made to these premises and 2 notices was served. The Factory Inspector in the course of his duties, draws to the attention of the Council, any matters which it is the duty of the Council to enforce. The Department examines all plans submitted to the Borough Engineer and Surveyor for factory extensions, and comments are made upon the proposals.

### Outworkers.

7 persons were notified during the year to the Department as being engaged in the repair and alteration of apparel, the inspection of textiles, and the weaving of textiles.

### OFFICES, SHOPS AND RAILWAY PREMISES ACT, 1963.

Owing to shortage of staff and the differing duties carried out by the Public Health Inspectorate it has not been possible to arrange a full scale operation of the Act. It was decided to concentrate the efforts of the Health Department in the inspection of offices and retail shops excluding food premises for reasons outlined below. During the year, however, all but two of the offices registered received a general inspection. Of the 155 retail shops registered under the Act, 56 received a general inspection during the year. Catering establishments, etc., together with a large proportion of retail food shops, were not inspected under the Act as it was felt that the majority had only recently been inspected under the Food Hygiene Regulations. It is hoped that these premises will be inspected for the purpose of this Act during 1966.

Of the 92 premises receiving a general or initial inspection only 8 complied fully with the requirements of the Act. The occupiers of the remaining premises were notified of their responsibilities and requirements under the Act and these were mainly for the provision of thermometers, first aid materials and/or boxes, running hot water for washing facilities and copies of the abstracts of the Act. The other main requirements asked for were the cleansing and redecoration of walls and ceilings, and the cleansing and repairs to water closet compartments.

Two non-fatal accidents were reported to the local authority during the year, one caused by falling down a flight of stone steps, the other being of a more serious nature when a crane rope fractured releasing a heavy loaded bogey on to the head of a person standing below.

### INSPECTION AND SUPERVISION OF FOOD.

### A. SALE OF MILK.

1. The Milk and Dairies (General) Regulations, 1959.

Distributors of Milk residing in the area ... 62

Distributors of Milk residing outside the area ... 16

2. The Milk and Dairies (General) Regulations, 1959. 35 inspections were made. 9 notices were served.

### 3. Milk Sampling.

The following tables show the number and results of samples taken by the Department for bacteriological examination:—

			Satisfactory	Void	Unsatisfactory	Total
Pasteurised	• • •		4			4
Untreated	• • •		40		1	41
Sterilised	• • •	• • •	<del></del>			
			4.4			
			44		1	45

### 4. Examination for Bacillus Tuberculosis and Brucella Abortus.

During the year 45 samples of milk were submitted for examination for Bacillus tuberculosis and 41 for Brucella abortus. All the Bacillus tuberculosis samples were negative.

Once again it was gratifying to note that all the samples of milk examined for the presence of Bacillus tuberculosis were free from infection.

### Brucellosis:

Ring Test 45 No. Positive 8. Guinea Pig 6 No. Positive 2.

Cream Culture Test 17 No. Positive 3.

Serum Agglut. 8 No. Positive 1.

In respect of the 3 positive results for Brucella abortus, the producers in each case were notified as also were the Ministry of Agriculture, Fisheries and Food. In two cases the milk was produced outside the district and the authorities concerned were notified of the result.

### B. MEAT INSPECTION.

The following table shows the number of animals slaughtered at the Public Abattoir, Liversedge. One Inspector is employed full-time at the Abattoir to ensure 100% inspection:—

Month		Beasts	Sheep	Pigs	Calves	Goats	Total
January		439	941	${354}$	$\frac{1}{2}$	1	1737
February	• • •	374	738	380	5		1497

Total weight of meat condemned during the year was :-

Tuberculosis Other diseases	•••	 •••	Tons  4	cwts. 2 —	qrs. 1 2	16
			4	2	3	17

Condemned meat was collected by the following firms:—

Leiner de Mulder Ltd., Doncaster. Dunnings Animals By-Products Ltd., Barnsley.

Slaughter of Animals Act, 1958.

The Slaughterhouses (Hygiene) Regulations, 1958-59.

The Slaughter of Animals (Prevention of Cruelty) Regulations, 1958-59.

26 licences were granted for the purpose of slaughtering or stunning animals in a slaughterhouse or knackersyard.

232 visits were made to the Abattoir in connection with administrative and supervisory duties.

### PUBLIC ABATTOIR.

Early in the year the modernisation of the public abattoir was completed. The new extensions and additions to the premises include a covered walk way from the lairage to stunning pens and bleed troughs, by-products rooms, and hide and skin store on the south and east sides of the building. On the west side there have been provided offices for the Meat Inspector and for the tenancy of the wholesalers using the abattoir. Also on this side of the building is provision for casualty slaughter and suspect meat, and a welfare block comprising changing rooms, toilets and canteen.

The internal re-arrangement of the building has brought all carcase dressing into one room and a modified line system is in use. Electrical and mechanical aids have been provided in the form of hoists, saws, and a pig carcase dehairing machine. Carcase hanging space at ambient temperature remains in its original position whilst a refrigerated chill room 31 ft. x 28 ft. has been constructed in the former sheep and pig slaughter hall. This unit is capable of reducing 15 tons of meat to 40/45°F in two days. Space has also been made available for wholesalers to install their own lock-up cabinet type refrigerators if desired.

New tiled flooring has been laid throughout, and the wall tiles have been renewed in the slaughterhall. Artificial lighting is by electric fluorescent tubes in each room. The overhead runway has been replaced throughout by the double steel bar type, with twin wheeled runners.

Externally, the layout of the forecourt has been re-styled and all parking areas, and vehicular access points have been surfaced with tarmacadam.

In addition to the general modernisation scheme, a sewage treatment plant, consisting of mechanical screens, settling tanks and lagoons, was constructed on the site as a requirement under the Drainage of Trade Premises Act, 1963. Further additional equipment was provided in the form of a vertical copper hot water calorifier of 400 gallons capacity to work in conjunction with the existing Clayton Steam Generator, as a result of the former calorifier being declared unfit for further use by the Council's Insurers. This unit provides hot water at a thermostatically controlled temperature of 120°F approximately, to all necessary points on the premises.

The work carried out brings the premises up to the standard required by the various Regulations made under the Slaughterhouses Act, 1958. The whole of the planning of the project was carried out by the Borough Engineer's Department in close co-operation with this Department and various manufacturers of Abattoir equipment, and is in my opinion the satisfactory result of a considerable amount of research and deliberation.

### C. INSPECTION OF OTHER FOODS.

(a) The following unsound food was inspected and condemned during the year. This food was disposed of in the Corporation's controlled tips:—

· · · · ·			The
			Lbs.
Canned meat, ham, etc.	•••	• • •	2619
Canned fish	• • •	• • •	25
Canned vegetables	• • •	• • •	242
Canned fruit	•••	• • •	648

### Swimming Baths.

The only swimming bath in the Borough is situated in Tofts Road, Cleckheaton, and is owned by the Corporation. The capacity of the swimming pool is 50,000 gallons and the water is obtained from the town's mains and changed every two years. Continuous chlorination is carried out after filtration, thus ensuring that there is a complete treatment of water every 5 hours. The filters are cleansed three times weekly, and any depreciation in the bulk quantity of water during this process is replaced from the mains supply.

Routine tests are carried out daily to ascertain that the correct amount of residual chlorine in the water is maintained.

### REFUSE COLLECTION, REFUSE DISPOSAL AND SALVAGE.

### A. Refuse Collection and Disposal.

The staff engaged on this work are as follows:—
General Foreman, 7 Drivers, 22 Dustmen, 2 Salvage Workers,
2 Tipmen.

The number of vehicles comprises:—

5 Dennis Paxits (24 cu. yards)

1 Dennis Side Loader (8 cu. yards)

1 Dennis Side Loader (12 cu. yards)

1 Weatherill Hydraulic Loading Shovel

The department was responsible for the collection and disposal of refuse from 15,310 premises.

The total weight of refuse collected was 11,641 tons and 12,907 tons were disposed of at two controlled tips.

(a) An incentive bonus scheme for dustbin emptying was introduced in an effort to obtain a weekly collection. The basic number of bins to be emptied for a forty-two hour week was fixed at 675 and this would give the four men and a driver a bonus of 30/- per man if a five day week were achieved. Subsequently with the introduction of a 40 hour week the target figure was reduced to 640 bins and the weekly payment rose to 37/-.

### (b) Paper Sack system of refuse storage.

During the year a pilot scheme was introduced on a Corporation Housing Estate of 310 houses which was also situated in a Smoke Control Area. Difficulties were experienced at the outset, but these were expected. The object of the scheme was to find how the system would work in a Smoke Control Area.

At the end of the year it was apparent that many tenants found that the sack was not large enough for their needs and there was a surprising amount of damage done to sacks by dogs. There was some saving in the time spent on collection, but this was considerably improved by a re-organisation of the method of collection, i.e., emptying sacks from both sides of the streets at the same time instead of working sides of the streets separately as was done in the case of dustbins.

A survey was carried out with the following results:—

Questionnaires sent out	• • •	• • •	• • •	• • •	• • •	310
Questionnaires returned	• • •	•••	• • •	• • •	• • •	265

on the scheme	• • •	•••	• • •	• • •	•••	192

### (c) Controlled tips.

Serious tip fires occurred again on both controlled tips. Tipping space at the Bottoms, Heckmondwike, is now so reduced that it is unlikely to last longer than August, 1966. The tip at Cliffe Hollins Lane, Oakenshaw, will then be the only one available and is not a satisfactory site due to its exposed position at 550 ft. above sea level. Considerable nuisance from waste paper is caused to adjoining farm land in the summer due to prevailing winds. The shortage of tipping space, the change in the character of household refuse, and the need for disposal of industrial and trade refuse together with bulky household articles indicate that the Committee will have to consider alternative methods of disposal by separation and incineration plant very shortly.

### B. Salvage.

The income from the sale of 258 tons of waste paper was £2,293 (financial year 1964/65). The waste paper salvage bonus scheme was revised during the year giving workmen a maximum of £3 per month if 38 tons of waste paper were collected.

### C. Public Cleansing Costing Return.

In the decade since the Clean Air Act, 1956, became operative a considerable reduction in smoke pollution from industrial boiler plants has been achieved. Whilst it used to be common place to see black and dark smoke being regularly emitted from mill chimneys throughout the Borough, such emissions are now the exception and give rise to comment and complaint from the public who previously accepted them as the unavoidable consequence of residing in an industrial area. It is indeed rewarding to take a panoramic view of the Borough and note the clear chimney tops of industrial premises. The considerable reduction in industrial smoke pollution is due in the main to the replacement of obsolete methods of firing of fuel and of equipment by modern mechanically fired plant. This has been achieved by co-operation between industry and officers of the Department and it has not been necessary to institute any legal proceedings.

Whilst the pollution of the atmospher<sup>e</sup> by smoke from industrial boiler plants is no longer a problem, a problem does exist in disposing of refuse from some industrial premises. As the burning of refuse in the open or in unsuitable incinerators gives rise to nuisance from smoke and fly ash, alternative means of disposal are now required. Purpose made incinerators are capable of burning most types of industrial refuse without causing nuisance but for small firms these appliances are expensive to purchase and unlike boiler plant the cost cannot be recovered by the resultant saving in fuel. Where at all possible the Department endeavours to assist by arranging for disposal on the Council's controlled tips but this is limited by shortage of tipping space. Perhaps the answer is the provision of a municipal destructor plant.

### Domestic Pollution.

During the year progress was continued in the control of pollution from domestic premises and the following table shows the position at the year end:—

	Number	Total No. of premises	No. of houses	No. of other premises	Acreage
1. Smoke Control Areas now operative	5	4159	3940	219	1828 · 5
<ol> <li>Smoke Control Areas confirmed but not yet operative No. (6 Area)</li> <li>Smoke Control Areas submitted and await-</li> </ol>	1	996	924	72	190.0
ing confirmation (No. 7 Area)	1	1191	939	252	245.0
	7	6346	5803	543	$\boxed{2263\cdot 5}$

Smoke Control Orders have been made covering 46% of the houses and 27.4% of the acreage of the Borough.

The No. 6 (Whitehall Road/Scott Lane) Smoke Control Order was proposed to become operative on the 1st August, 1965, but due to delay outside our control and the holding of a Public Inquiry, the Order was not confirmed until the 31st May, 1965, with the operative date being the 1st December, 1965. As this was the first Order in which more extensive fireplace alterations were required with the consequent increase in time taken by contractors on individual houses plus the fact that some makes of gas appliances and solid fuel room heaters were taking longer to be delivered than anticipated, it was felt that the date of operation of this Order should be postponed until the 1st April, 1966, and this was agreed to by the Council.

The No. 7 (Cleckheaton Central/Rawfolds) Smoke Control Order was surveyed and submitted to the Minister of Housing and Local Government during the year and is still awaiting confirmation. The survey was again carried out by postal means and many thanks are again due to the Borough Treasurer's Department for their help and co-operation in addressing the considerable number of envelopes required.

### Concentration of SO2 and Smoke.

The following tables show the concentration of SO<sup>2</sup> and smoke in the air as recorded at the Health Centre, Greenside, Cleckheaton. Corresponding figures for the previous year are not given as the measuring apparatus was then sited at the former offices of the Health Department at Elm Bank, Cleckheaton.

It should be noted that the present site is adjacent to the local bus station with the consequent low level emission of sulphur compounds from diesel fuel oil used by the buses. Concentration of SO2 in the Air in Microgrammes/Cubic Metre.

### SHOPS ACT.

No. of shops	•••	• • •	•••	•••	•••	•••		450
Food Shops	• • •	•••	• • •	• • •	• • •	•••	•••	
Other Shops		• • •	• • •	• • •	• • •	• • •	•••	131

2 visits were made during the year specifically for the provisions of this Act, but many shop inspections have been carried out principally under other Acts such as Food & Drugs Act, 1955, and Offices, Shops & Railway Premises Act, 1963.

### PUBLIC CONVENIENCES.

The accommodation below is provided in 17 conveniences throughout the area:—

Females. 32 water closets.

Males.

21 water closets and urinal accommodation.

Two men are engaged full-time in cleansing these conveniences. The buildings are in the main, modern structures designed specifically for the purpose.
